

Redis Troubleshooting Guide

1. Connection refused on port 6379
 - Is redis-server running? Try: `redis-cli ping`
 - Check `bind` / `protected-mode` in `redis.conf`
2. Timeouts under load
 - Raise the client timeout; check `slowlog` and `latency monitor`
3. `RedisConnectionFailureException` in Spring
 - Verify `spring.data.redis.host` / `port` / `timeout`
